X-E1

Photographer's
Guidebook

Compact size that sits perfectly in your hands, and traditional design that suits premium photography...

Its authenticity makes the camera a joy to hold in your hands and a pleasure to use for photography.

A new world of photography expands from **X-E1**.

Watch the Video

A fine camera that **inspires** your love for photography: X-E1

Equipped with the large APS-C sensor

X-E1 carries the same sensor as the one featured in X-Pro1, the camera for professional photographers. It produces creamy bokeh and stunning color reproduction to bring your photographs to a higher level.

Intuitive analog operation system and elegant design

Frequently-used dials and buttons are laid out with intuitive photography in mind. This analog operation system has also helped achieve a premium design with a traditional camera look.

Natural and easy-to-see electronic viewfinder

X-E1's electronic viewfinder gives a sharp and detailed view in natural color tones so that you can check the overall frame in a quick glance.

Quick response comparable to the performance of DSLRs

You can start shooting the moment you turn it on. X-E1's response performance is equivalent to that of DSLRs in terms of quick AF (autofocus) on a subject and high-speed continuous shooting.

Built-in flash

The compact body features a built-in flash, which automatically adjusts its strength when providing fill flash to light a subject's face in backlight or shooting in low light conditions.

Fujinon XF lenses with high picture quality

A full lineup of XF lenses is available for a sharp and crisp reproduction of your subject across the frame. The lineup will continue to expand to cater to your range of photographic expressions.
