ADVANCED SR AUTO MODE

The SR Auto Mode enables the camera to automatically optimize settings to suit the scene. The scene selected by the camera in ADVANCED SR AUTO mode is shown by an icon in the display. To enable this mode, flip the switch near the shutter speed dial to Auto.

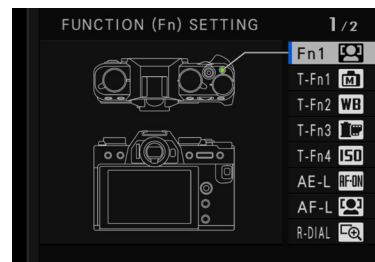

FACE SELECT

FACE SELECT can be enabled/disabled by pressing the function (Fn) button to which FACE SELECT is assigned. Enabling the FACE SELECT function allows the Focus Lever or Touch Controls to select the face that will be used for focus. FACE SELECT is automatically enabled in ADVANCED SR AUTO mode.

INDEPENDENT MOVIE SETTINGS

Go to the MOVIE SETTING menu and enable the MOVIE SILENT CONTROL feature. By activating this feature, the shutter speed / ISO and aperture dials will be deactivated and will be controlled via touch screen instead. This will allow for independent exposure settings for video recording.

FUNCTION (Fn) BUTTONS

To customize your Fn buttons, long press the DISP. BACK button. A diagram of the camera and the Fn buttons will appear. Select the Fn button you want to customize and scroll through the features to choose the function you want to assign.

BLUETOOTH REMOTE RELEASE

You can trigger the shutter remotely from a smartphone or tablet. Follow the instructions to connect the camera to the FUJIFILM remote app to use this feature. The camera will automatically connect to the app once paired. Select the Remote Release icon and tap the shutter button to take pictures. When the camera is configured for bulb photography, you can slide the shutter button up to start the exposure.
